

Inzomia

Imaging Software

Zoom Studio 2

Zoom Studio is a stand-alone windows application that includes a wide range of tools to quickly create dynamic and interactive image presentations on web sites.

The extensive functionality of the program considers all aspects of publishing images on the web, no matter if you're building a site from scratch or want to change the existing image architecture. The program allows you to easily build picture galleries from ready-made templates, convert all images on a site to zoomable objects, make movie-like animations, create dynamic image links, wavelet compress your images etc.

Features Zoom Studio2

- Manage vast amount of images
- Create thumbnail galleries
- Create Full screen internet slideshows
- Make movies out of still images without increasing filesize
- Convert web pages to include zoomable images
- Integrates with common Image and HTML editors
- Includes software to create LuraWave images
- No per Site/Image deployment licence required

Features Inzomia plug-in

- Interactive real time pan and zoom
- Full screen image display
- Advanced scripting possibilities
- Streaming of high quality low bandwidth Wavelet images
- Supports common image formats
- Works with standard web servers
